### **ECO 414S/3502S: Energy and Regulation**

**CALENDAR DESCRIPTION:** This course surveys important features of energy markets and related environmental challenges. One of the central objectives is to provide an understanding of the key economic tools needed to analyse these markets. A related objective is the development of a framework for understanding the public discourse on energy and the environment. Topics include the theoretical and empirical tools necessary to analyse energy markets, the politics and history of energy, the hydrocarbon economy (oil, natural gas and coal), electricity markets, global warming and other externalities, renewable energy, conservation, carbon taxes and 'cap-and-trade'.

**LOCATION AND TIME:** Mondays 2-5 SK 548, 246 Bloor West

#### **EVALUATION:**

Evaluation for this course consists of a Paper worth 40%, assignment worth 20%, and two tests worth 20% each (held Monday February 11 and Monday April 1, 2019). The due date for the assignment is Friday March 8, 2019.

The only generally acceptable reason for missing an exam or term test is illness. A medical certificate is required. We are asked to remind you that plagiarism and cheating are **serious** academic offences with potentially serious penalties.

#### **RESEARCH PAPER:**

- a. Undergraduates taking the course may write an overview paper analysing an energy topic of interest.
- b. Graduate students taking the course are required to include some empirical analysis in their paper.

**Paper Outline is due February 22, 2019. This is a hard deadline. Late submissions will be penalized 10% per day on the paper grade.** Please submit the outline electronically through Quercus and name the file using your name. For example, my outline would be "YatchewOutline.doc" or "YatchewOutline.pdf". Your two-page outline must contain the following:

- a. An abstract not exceeding 200 words
- b. A list of key references (be sure to do a citation search)
- c. An outline of how your analysis will be conducted and the anticipated results of your analysis
- d. If your analysis is empirical, a spreadsheet with any data that you will be using

**The Paper is due Friday April 5, 2019, by midnight. This is a hard deadline. Late submissions will be penalized 10% per day.** Please submit the paper electronically as an attachment, and name the file using your name. For example, my paper would be "YatchewPaper.pdf".

#### **IN THE NEWS**

Students will follow current issues in energy by signing up for news alerts (e.g., through Google Alerts). Subscribe to MIT Energy Initiatives daily updates by visiting <http://mitei.mit.edu/about/contact>. Each class will begin with a brief discussion of the week's developments in energy. Students should regularly

visit MIT Technology Review <http://www.technologyreview.com/> to review advances in energy. For insightful commentary on a range of issues, some related to energy, please sign up for the weekly briefing from Project Syndicate <http://www.project-syndicate.org/>.

## COURSE MATERIALS

### Readings<sup>1</sup>

1. Richard Muller, *Energy for Future Presidents, The Science Behind the Headlines*, Norton 2012. Hardcopy and Kindle editions available.
2. Jeffrey Sachs, *The Age of Sustainable Development*, Columbia University Press, 2015. Hardcopy and Kindle editions available. Also available electronically through UofT Libraries.

### Additional References and Data Sources:

1. Bryne Purchase, *Navigating on the Titanic, Economic Growth, Energy and the Failure of Governance*, McGill-Queen's University Press, 2013. Hardcopy and Kindle editions available. Also available electronically through UofT Libraries.
2. *Encyclopedia of Energy*, ed. Cutler Cleveland. Available electronically through UofT Libraries.
3. Daniel Yergin, *The Quest*, The Penguin Press, 2011
4. David Buchan, *The Rough Guide to the Energy Crisis*, Rough Guides, 2010. Hardcopy is difficult to obtain as it is out of print. Available electronically at Amazon.ca on Kindle.
5. Carol Dahl, *International Energy Markets*, PennWell, 2004.
6. Joseph Dukert, *Energy*, Greenwood Press, 2009.
7. Subhes Bhattacharyya, *Energy Economics*, Springer, 2011. Cutler Cleveland. Available electronically through UT Libraries.
8. International Energy Agency <http://www.iea.org> *Energy Statistics Manual, Electricity Information, IEA Statistics, Key World Energy Statistics*
9. National Energy Board (Canada). *Canadian Energy Overview, Energy Briefing Note, Canadian Energy Dynamics, Energy Market Assessment*
10. BP (formerly British Petroleum) [www.bp.com/statisticalreview](http://www.bp.com/statisticalreview), *Statistical Review of World Energy, Statistical Review Workbook* (Excel spreadsheet)
11. Lawrence Livermore Laboratories. *Energy and Carbon Flow Charts*
12. World Resources Institute – GHG gas data, slide presentation, papers, annual “Stories to Watch”.

## LECTURE TOPICS AND READINGS

1. Background and Introduction (2 weeks)
  - a. Yatchew, A. 2014: “Economics of Energy: Big Ideas for the Non-Economist”, *Energy Research and Social Science*, 1(1), 74-82.
  - b. Yatchew, A. 2016, “Rational vs. ‘Feel-Good’ Carbon Policy – Transferability, Subsidiarity and Separation” *Energy Regulation Quarterly*, 4:3, 31-40.

---

<sup>1</sup> In some cases Kindle editions are available and considerably less costly than hardcopy. You do not need a Kindle device as Kindle books can be read on Macs and PCs.

Available at <http://www.energyregulationquarterly.ca/articles/rational-vs-feel-good-carbon-policy-transferability-subsidiarity-and-separation#sthash.u6jtvAJI.dpbs>.

- c. Richard Muller, *Energy for Future Presidents, The Science Behind the Headlines*, Norton 2012. See also Review of Richard Muller’s book by Bill McKibben: “The Scientist Who Made a Total Turnaround”, *New York Review of Books*, October 11, 2012. Reply by Richard Muller: “On Turning Down the Heat”, *New York Review of Books*, November 22, 2012.
2. Energy in World History (1 week)
    - a. Vaclav Smil, “World History and Energy”, in *Encyclopedia of Energy, Volume 6*.
    - b. Vaclav Smil, “War and Energy”, in *Encyclopedia of Energy, Volume 6*.
    - c. Amy Myers Jaffe, “Geopolitics of Energy”, in *Encyclopedia of Energy, Volume 2*.
  3. Economic Tools: Theory and Empirical Analysis. (1 week)
    - a. Theory: Refer to your texts in microeconomics to review the following subject areas: supply/demand analysis; consumer and producer theory; industry structures – monopoly, oligopoly, monopolistic competition, perfect competition; game theory; externalities; public goods; taxes and deadweight loss.
    - b. Empirical Work:
      - i. David Ryan and Andre Plourde, “Empirical Modeling of Energy Demand”, in *International Handbook on the Economics of Energy*, eds. Joanne Evans and Lester Hunt, 2009, Edward Elgar.
      - ii. Hendry, D. and K. Juselius (2000) “Explaining Co-integration Analysis: Part I”, *The Energy Journal*, vol. 21, 1-42. Hendry, D. and K. Juselius (2002) “Explaining Co-integration Analysis: Part II”, *The Energy Journal*, vol. 22, 75-119.
  4. Global Warming and Other Externalities (2 weeks)
    - a. Brander, J. A., and Taylor, M. S. “The Simple Economics of Easter Island: A Ricardo–Malthus model of renewable resource use.” *Am. Econ. Rev.* 1998, 88(1), 119–138.
    - b. Brander, J.A.. “Easter Island: Resource Depletion and Collapse”, *Encyclopedia of Energy*, 2005, ed. Cutler Cleveland.
    - c. Nordaus, William, “Climate Clubs: Overcoming Free-riding in International Climate Policy”, *American Economic Review* 2015, 105(4): 1339–1370.
    - d. Nordhaus, W. “The Pope and the Market”, *The New York Review of Books*, issue dated October 15, 2015.
    - e. *Economists’ Voice*, The Berkeley Economic Press.
      - i. Stiglitz, J. 2006, “A New Agenda for Global Warming”
      - ii. Arrow, K. 2007, “Global Climate Change: A Challenge to Policy”
      - iii. Schelling, T. 2007, “Climate Change: The Uncertainties, the Certainties, and What They Imply About Action”
    - f. Socolow, R. and S. Pacala
      - i. “A Plan to Keep Carbon in Check”, *Scientific American*, pp. 50-57. September 2006.
      - ii. “Stabilization Wedges: Solving the Climate Problem for the Next 50 Years with Current Technologies”, *Science*, 305, pp. 968-72, 2004.
    - g. Robert Stavins, “The Problem of the Commons: Still Unsettled After 100 Years”, *American Economic Review*, 2011, 81-108.

- h. Robert Rohde, Richard A. Muller, Robert Jacobsen, Elizabeth Muller, Saul Perlmutter, Arthur Rosenfeld, Jonathan Wurtele, Donald Groom, Charlotte Wickham, "A New Estimate of the Average Earth Surface Land Temperature Spanning 1753 to 2011" 2011, Berkeley Earth Surface Temperature, <http://www.scitechnol.com/2327-4581/2327-4581-1-101.pdf>
  - i. Sixteen Concerned Scientists, "No Need to Panic About Global Warming", *Wall Street Journal*, Op-Ed, January 27 2012. William Nordaus (response) "Why the Global Warming Skeptics Are Wrong", *New York Review of Books*, March 22 2012. Cohen et al. and Nordaus response, "In the Climate Casino: An Exchange", *New York Review of Books*, April 26 2012. Fred Singer, "The Climate Contrarians", *New York Review of Books*, August 16 2012.
  - j. Bill McKibben, Global Warming's Terrifying New Math, *Rolling Stone*, July 19, 2012.
5. Regulation and Government Intervention (2 weeks)
- a. Joseph Aldy, Alan J. Krupnick, Richard G. Newell, Ian W.H. Parry, and William A. Pizer. "Designing Climate Mitigation Policy" *Journal of Economic Literature*, 2010, 48:4, 903-934.
  - b. Martin Weitzman, "Prices vs. Quantities", *Review of Economics Studies*, 1974, 41:4, 477-91.
  - c. Dimitropoulos, D. and A. Yatchew 2017, "Is Productivity Growth in Electricity Distribution Negative? An Empirical Analysis Using Ontario Data", *The Energy Journal*, 38:2,175-200.
